

Annual Drinking Water Quality Report for 2024
Delmar Utility Commission
100 South Pennsylvania Avenue
Delmar, Maryland 21875
MD PWS ID# 0220001
PWS ID# DE0000567
May, 2025

We are pleased to present to you this year's Annual Water Quality Report. This report is designed to inform you about the quality of the water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water. Our water source is **ground water. We have two wells that draw from the Manokin Aquifer.**

The Department of Natural Resources and Environmental Control in conjunction with the Division of Public Health has conducted source water assessments for nearly all community water systems in Delaware. Contact the Delmar Town Hall at 410-896-2777 or 302-846-2664 regarding how to obtain a copy of this assessment or go to <http://delawaresourcewater.org/assessments/>. Overall, the drinking water supply system exceeds drinking water standards for metals; has a high susceptibility to petroleum hydrocarbons; a moderate susceptibility to nutrients; and a low susceptibility to other inorganic substances, other organic substances, pathogens, PCBs, and pesticides.

The Maryland Department of the Environment's Water Supply Program completed a Source Water Assessment for the Town of Delmar. A copy of that assessment can be reviewed at City Hall. For more information call 1-800-633-6101.

https://mde.maryland.gov/programs/Water/water_supply/Source_Water_Assessment_Program/Pages/by_county.aspx

If you have any questions about this report or concerning your water utility, please contact the **Town Manager Jeff Fleetwood, at 410-896-2777 or 302-846-2664 between 8:00 a.m. and 4:30 p.m. Monday through Friday.** We want our valued customers to be informed about their water utility. If you want to learn more, please attend any of our regularly scheduled meetings. They are held **the first Monday of every month at 6:30 p.m. at the Delmar Town Hall, 100 S. Pennsylvania Avenue, Delmar, Maryland.**

Public Health, Office of Drinking Water and Delmar Utility Commission routinely monitor for contaminants in your drinking water according to Federal and State laws. This table shows the results of our monitoring for the period of January 1st to December 31st **2024.**

In this table, you will find many terms and abbreviations with which you might not be familiar. To help you better understand these terms, we have provided the following definitions:

Non-Detects (ND) - laboratory analysis indicates that the constituent is not present.

Parts per million (ppm) or Milligrams per liter (mg/l) - one part per million corresponds to one minute in two years or a single penny in \$10,000.

Action Level – The “Action Level” (AL) The of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Parts per billion (ppb) or Micrograms per liter - one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.

Parts per trillion (ppt) or Nanogram per liter- one part per trillion corresponds to one minute in

2,000,000 years, or a single penny in \$10,000,000,000.

Picocuries per liter (pCi/L) - picocuries per liter is a measure of the radioactivity in water.

Maximum Contaminant Level (MCL) - The “Maximum Allowed” (MCL) is the highest level of a contaminant allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG) - The “Goal” (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL) –The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG) –The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

TEST RESULTS						
Contaminant	Violation Y/N	Level Detected/Range	Unit Measurement	MCLG or MRDLG	MCL or MRDL	Likely Source of Contamination
Disinfectants & Disinfection By-Products						
Chlorine as (Cl ₂) Delaware Maryland (2024) Highest level detected Range	N	1.05-1.42 0.9 0.3-1.18	ppm	4	4	Water additive used to control microbes
Haloacetic Acids (HAA5) Delaware Maryland (2023-2024) Rite Aid Highest level detected Range	N	 0 0 0-0	ppb	n/a	60	By-product of drinking water disinfection
TTHM Total trihalomethanes] Delaware Maryland (2023-2024) Rite Aid Highest level detected Range	N	 2.8-2.8 0 0-0	ppb	0	80	By-product of drinking water chlorination
Inorganic Contaminants						
Barium Delaware Maryland (2022) Highest level detected Range	N	 0.15813 *(2019) 0.113 0-0.113	ppm	2	2	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits
Chromium Delaware	N	0	ppb	100	100	Discharge from steel and pulp mills; erosion of natural deposits
Fluoride Delaware Maryland (2022) Highest level detected Range	N	0.25-0.58 0.66 0.61-0.66	ppm	2 4	2 4	Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer and aluminum factories

Nitrate (as Nitrogen) Delaware Maryland (2024) Highest level detected Range	N	3 – 3.5 2.8 2.8-2.8	ppm	10	10	Runoff from fertilizer use; leaching from septic tanks, sewage; erosion of natural deposits
DI(2ethylhexyl) adipate 6/29/2023 Highest level detected Range	N	1.86 1.86-1.86	ppb	400	400	Discharge from chemical factories
DI(2ethylhexyl) phthalate 6/29/2023 Highest level detected Range	N	1.72 1.72-1.72	ppb	0	6	Discharge from rubber and chemical factories
Dibromochloromethane 3/15/2022 Highest level detected Range	N	0.00262 0.0026-2	MG/L	0.06	0.1	

Volatile Organic Contaminants

Xylenes Delaware	N	0 – 0.0013	ppm	10	10	Discharge from petroleum factories; discharge from chemical factories
---------------------	---	------------	-----	----	----	---

Radioactive Contaminants

Combined Radium 226/228 (2021) Maryland	N	0.5	pCi/L	0	5	Erosion of natural deposits
Gross Alpha excluding radon and uranium Delaware	N	0-5.38	pCi/L	0-5.38	15	Erosion of natural deposits

Secondary Standards

CONTAMINANT	Level Detected	Average	Unit Measurement	MCLG
Sodium (Na) Delaware	12.9		ppm	n/a
Radium-228 (2021) Maryland Highest level detected Range	0.5 0.5-0.5		pCi/L	0
Alkalinity (Alk) Delaware	8.96		ppm	n/a
pH Delaware	*(2018) 7.46		ppm	6.5 – 8.5
Chloride (Cl) Delaware	12.2- 14.6	13.65	ppm	250
Sulfate Delaware	6.6-11.1	8.86	ppm	250

<i>Lead and Copper</i>	Viola tion Y/N	90 th Percen tile	Range of Tap Sampling	Units	MCLG or MRDLG	(AL Limits) / # Sites Over	Likely Source of Contamination
Copper (distribution) (2021) Maryland Delaware	N	0.06 0.01	0-0.15 0-0.01	ppm	1.3	AL= 1.3	Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives

Lead (distribution) (2021) Maryland	N	1.2	0-0.0121	ppb	0	AL= 15	Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives
Delaware		2.0	0.0-2.0			Zero (0)	

*The state allows us to monitor for some contaminants less than once per year because the concentrations of these contaminants do not change frequently. Some of our data, though representative, are more than one year old.

All other contaminants were ND in compliance with the Safe Drinking Water Act.

An initial inventory of service line pipe materials located within our service area required to be submitted to the Maryland Department of the Environment (MDE) by October 16, 2024. We submitted the service line inventory report by the deadline, and the “report is available upon request”.

Delmar has completed the service line inventory required by U.S. EPA’s Lead and Copper Rule Revisions (initial inventory due October 16th, 2024). You can view the results by typing your address <https://dhss.120water-ptd.com> For more information on our service line inventory please call 410-896-2777.

Through completing a records review, it has been determined it has no Lead or Galvanized Replacement (GRR) service lines in its distribution system. This includes all system owned and customer portions of all service lines regardless of actual or intended use.

Construction records, meter replacements, and distribution maps were used to help us determine the composition of our systems service lines.

Delmar has reviewed all applicable sources of information to complete the inventory and will continue to identify and track service line materials as they are encountered during normal operations. If, in the future, a Lead or Galvanized requiring replacement (GRR) service line is found within our system, we will prepare an updated inventory and submit to the Maryland Department of the Environment and in addition, the inventory will be made publicly available for water customers to view, and customer will be notified of any change in the service line material, if applicable.

For more information on our service line inventory please call 410-896-2777.

Lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Delmar is responsible for providing high quality drinking water and removing lead pipes, but cannot control the variety of materials used in plumbing components in your home. You share the responsibility for protecting yourself and your family from the lead in your home plumbing. You can take responsibility by identifying and removing lead materials within your home plumbing and taking steps to reduce your family's risk. Before drinking tap water, flush your pipes for several minutes by running your tap, taking a shower, doing laundry or a load of dishes. You can also use a filter certified by an American National Standards Institute accredited certifier to reduce lead in drinking water. If you are concerned about lead in your water and wish to have your water tested, contact Delmar at 410-896-2777.

Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available at <http://www.epa.gov/safewater/lead>.

As you can see by the table, our system had no violations. We're proud that your drinking water meets or exceeds all Federal and State requirements. We have learned through our monitoring and testing that some constituents have been detected. The EPA has determined that your water is drinkable at these levels.

MCL’s are set at very stringent levels. To understand the possible health effects described for

many regulated constituents, a person would have to drink 2 liters of water every day at the MCL level for a lifetime to have a one-in-a-million chance of having the described health effect.

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity. In order to insure tap water is safe to drink, EPA prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. Food and Drug Administration regulations established limits for contaminants in bottled water, which must provide the same protection for public health.

- 1) Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operation, and wildlife.
- 2) Inorganic contaminants, such as salts and metals can be naturally occurring or result from urban storm water runoff, industrial or domestic wastewater discharge, oil and gas production, mining, or farming.
- 3) Pesticides and herbicides, which may come from a variety of sources, such as agricultural, urban storm water runoff, and residential uses.
- 4) Organic chemical contaminants, including synthetic and volatile organic chemicals, which are byproducts of industrial processes and petroleum production, and can also come from gas stations, urban storm water runoff, and septic systems.
- 5) Radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-426-4791.

Thank you for allowing us to continue providing your family with clean, quality water this year. In order to maintain a safe and dependable water supply we sometimes need to make improvements that will benefit all of our customers. These improvements are sometimes reflected as rate structure adjustments. Thank you for understanding.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

The Maryland Rural Water Association's State Circuit Rider assisted with the completion of this report.

Please call our office if you have questions.
